Québec Longitudinal Study of Child Development
QLSSC (E7) – 2004 Round

Consent Form

I hereby authorize an assistant of the University of Montreal Research Group to evaluate in my home rather than at school the physical condition of my child. The evaluation will include measurements of his weight, height, and adiposity (% of body fat obtained by means of three subcutaneous folds of the skin, at the triceps, calf, and abdomen), following the method of the Canadian Guide for Evaluation of Physical Condition. The child will also be required to execute jumps and sit-ups and other activities (running and playing with a ball).

I understand that this form is an integral part of the "In 2002, I was 5 years old" study, and that it constitutes an addendum to the one I have signed concerning the 2004 part of the study.

I have been notified that the purpose of this study is to gather the necessary information that will allow a better understanding of the factors that influence child development in Quebec.
